

**[04 February 2008] Not Seabee - but still based on an old classic... Antilles Seaplanes, LLC, launches "Super Goose" Amphibious Aircraft Production**

Gibsonville , North Carolina USA - Antilles Seaplanes, LLC, announces that it has begun accepting deposit orders on the production of completely new "Antilles Super Goose" amphibious aircraft. Based on the legendary G-21 Goose, the company's version has been

modernized to current day aviation standards to include turboprop engines, retractable wing floats, state-of-the-art avionics, interior environmental systems, and a variety of other technological improvements over the original airplane manufactured by Grumman. Additionally, a highly specialized military version of the Goose is currently being developed by Antilles for potential use by our nation's Special Forces.

The "Antilles Super Goose" is an extremely versatile twin engine, 10-seat "true" amphibian, designed to take off and land on water (minimum depth of 36 inches in oceans, islands, bays, rivers or lakes), regular paved runways, remote grass strips, rough dirt strips, and snow. With its fully retractable landing gear, the Goose offers speed, rough water capability, cross wind ability, payload, range, economics, and ruggedness unmatched by any other aircraft in its class. This multipurpose airplane can swiftly adapt as global civilian, military, government and special humanitarian support needs dictate. It is the true "All Terrain Vehicle," conquering air, water and land.

The Goose has a generously proportioned interior with additional storage areas in both the nose and the tail, plus an optional private toilet in the rear. The aircraft is powered by twin Pratt & Whitney Canada PT6A turboprop engines that produce an air speed of over 200 knots (approximately 230 miles per hour); carries people, fuel and cargo in excess of 5,400 pounds; and has a range of over 1,200 nautical miles (six hours plus instrument flight reserves).

The Goose is back and ready for work and adventure. For more information on the line of Antilles Seaplanes' "Super Goose" aircraft, contact David Dyer or Warren Ludlam at phone number 336.449.5702, by e-mail at [info@antillesseaplanes.com](mailto:info@antillesseaplanes.com), or visit [www.antillesseaplanes.com](http://www.antillesseaplanes.com).
